Discontinuation of digital excitation system TSG2D

Dear Ladies and Gentlemen,

herby we like to inform you about the discontinuation of our digital exciter system TSG2D, which has been installed in your factory. The last 17 years we were very successful out of business and have equipped more than 400 units around the world.

Since the beginning of the year 2017, we are on the market with our new digital excitation system **IREG**. Down to the present day, there are more than 50 factories equipped and retrofitted to our new excitation system.

For this reason, we will **discontinue the excitation system TSG2D to the 01.05.2019**.

With the **IREG**, company LST presents the latest generation of digital exciter systems. Well-known and longtime proved functions were taken over, developed further and packed into a modern and innovative design:

- Easy operation and handling by Touch display
- Latest Hardware and Software developed according to IEEE standards
- Ethernet interface for remote connection and bus connection via Profibus, Profinet, Modbus
- Additional functions such as PSS, synchronization, diode monitoring, reactive power management

On demand we gladly submit a proposal for modernizing and retrofitting your exciter system to our new **IREG**.

For any questions to the **IREG**, as well as the discontinuation of the TSG2D, your contact person at LST will be at your disposal.

With best regards

Matthias Tippelt
